

Backup as a Service

Simply Better Backup

Key Benefits

- Protect on-prem, edge, and cloud data with a single backup service
- Simple and inclusive capacity based pricing
- Single UI to manage all your data
- Data encryption with flexible key management
- Built on proven backup software and SaaS platform

Backup is required for any organization to protect and secure their data. Yet most legacy backup products don't address the new realities IT teams face; budget cuts, complexities of point solutions, and accelerated mandates to move to cloud. With cloud adoption rising, organizations are looking to reduce their infrastructure burden and become more agile. As a result, many enterprises are turning to Backup as a Service (BaaS) to help modernize their data management strategy by delivering:

- Predictable costs that eliminates CapEx with cloud-based subscription pricing
- Simplified operations with a single backup solution for all data across on-premises, edge and cloud
- Freeing up IT and enable others to do more with data and drive innovation

Easy as Sign-up, Connect, and Protect

Cohesity DataProtect delivered as a Service allows you to move to a more predictable OpEx cost model, simplify backup across hybrid cloud, and to protect and do more with your data. Just sign-up, connect, and start protecting your data within minutes.

“We have been testing DataProtect delivered as a Service for some time, and I am very pleased with its performance. The UI is simple, clean, and easy to navigate, and data ingestion and retrieval have been a snap. As a long-term Cohesity customer, this is the type of innovation I have come to expect from this data management company.”

Tim Kovars, Senior Systems Engineer, Quarles & Brady LLP

Predictable costs

Eliminate CapEx

Make long procurement cycles and budget headaches a thing of the past. Simplify by shifting to an OpEx model that eliminates overprovisioning and ensures you only pay for what you need.

Front-End Capacity Pricing

Simple and predictable capacity pricing that is measured on the front end capacity of your environment you are protecting. No need for complicated sizing calculators or keeping count of data source user licenses anymore.

No Hidden Costs

All that you need is already included. Our inclusive pricing includes on-going feature updates, unlimited data restores, and eliminates the concerns around spiking data egress charges. What you see is what you pay.

Hybrid cloud made easy

Eliminate Silos

Backup as a Service that's designed to protect both on-premises and cloud data - no gateways, no separate tools, no silos— just unified backup across locations.

Secure and Efficient

Minimize data transfer costs between on-premises and cloud locations while protecting both data in flight and at rest with encryption and flexible key management.

True Hybrid Experience

BaaS for cloud-native and SaaS, and on-premises backup for others - benefit from one UI to manage them both. Why complicate things with separate products just to do backup?

Free up Resources

Reduce or eliminate the time spent by IT managing infrastructure and provide self-service backup for teams and locations that have limited resources such as remote offices.

Protect more and do more

Protect All Locations

Whether it's an on-premises application, SaaS data, or your remote offices—we've got all your locations and key workloads covered with a single backup service that consolidates data.

Flexible Recovery

Not all failure and recovery capabilities are created equal. DataProtect delivered as a Service provides flexible recovery with bulk or granular restores to the original source or a new location.

Global Search

Global instant search allows you to find and recover your data quickly, no matter where it is, and without the hassles of digging into specific locations, jobs, or archives.

Workload Type	Supported Data Sources
Hypervisors	VMware, Hyper-V
NAS	Isilon, NetApp, Generic
Physical	Linux, Windows
Databases	Microsoft SQL Server, Oracle, Amazon RDS ²
SaaS	Microsoft 365 ¹
IaaS and PaaS	Amazon EC2, Amazon RDS ²

For the latest information on supported workloads, go to:
